Telefunken- Modcomp link

THE West German joint venture company between AEG-Telefunken (75%) and Modcomp of Florida (25%) is to be called ATM Computer GmbH and will be based in Munich. Digital Equipment's former Central European manager Helmuth Cnigl has been appointed president.

The new company will develop, manufacture and market minicomputer systems, and will start with Modcomp's Classic line and AEG-Telefunken's 80/20, 80/40 and 80/60 process control computers (October 25, 1979).

Scicon wins vote for MPs' retrieval system

SCICON has been chosen to provide an online information retrieval service to the House of Commons, on a bureau basis, finally bringing MPs into the computer age after 10 years of discussions.

Answers to Parliamentary Questions will be the first category of information to be loaded on to the system, giving MPs for the first time a subject index to Questions.

The service will run on a Univac 1100/81 at Scicon's computer centre in Milton Keynes, Bucks. The retrieval software will be the Univac's Unidex package, which uses the DMS 1100 database management system. This can handle fixed, format-

ted, or free text; at the House of Commons it will be used with a controlled indexing language that has already been compiled.

The online service will be supplanting nine different strip indexes that are currently in use in the Commons library (CW, February 29). Following Parliamentary Questions will be references to debates, legislation, EEC documents and current affairs.

When the system is fully operational about 100,000 references will be added per year. It is hoped to start live working in the autumn, in time for the new session of Parliament. Initially eight terminals will

be installed. In the library, in a nearby office building where data entry will be carried out, and one for use by the House of Lords. These will be 2830 and 2884 VDUs from Cifer, linked to Milton Keynes by private line.

Costs are not being disclosed, but they are described as "well within" the guidelines that had been laid down by the Commons services committee, namely £600,000 for the first year and £200,000 for subsequent years.

The contract with Scicon is for a minimum of six years. The system has been organised to be compatible with future developments in Parliamentary computerisation. These might include word processing, access

to outside databases and retrieval of full text from Hansard, which is now switching over to computer typesetting.

A computer and technical services section has been set up to run the system, headed by Jane Wainwright, formerly a researcher with Aslib, the special libraries association.

No attempt will be made to load data on to the system retrospectively, and so it will have to be used in conjunction with the strip indexes for some time.

About 45,000 Questions are tabled each year. The system will be expandable up to 30 terminals.

Siemens boost

SOFTWARE to enable terminals to communicate with both Siemens and IBM mainframes is to be developed by DFVLR, the West German space agency. The system will provide a bridge between SNA and Siemens Transdata terminals, and is regarded as a strong plus for Siemens since the West German government is encouraging its agencies with IBM machines installed to add Siemens machines where they need more power.

3M's last chance in the office?

OFFICE products firm 3M is facing its last chance to get into the electronic office market, says a US report. Meanwhile, the company has launched in the UK a digital facsimile transceiver capable of transmitting an A4 page in under one minute.

Called M9600, it operates closely in accordance with the expected International CCITT Group 3 recommendation for digital transmissions of under one minute.

At £8,990, the transceiver is about five times the price of 3M's M2346 launched in Europe 18 months ago. The firm says it is cheaper to use for over 50 transmissions a day within one country or 14 internationally.

Facsimile transceivers were still too expensive to replace postal service, said 3M's market development manager Mike Cook, but the UK market was currently growing at about 22% a year.

Briefing GEC delays cash for Immos

A REQUEST for general information about Immos has been put to the National Enterprise Board by GEC, and talks between the two will go ahead when it is received. According to the Department of Industry, GEC's interest in Immos is one reason for the government to delay further its decision about the second £25 million tranche.

AXE for Ireland

L.M. ERICSSON has confirmed that it has received orders from the Irish Ministry of Posts and Telegraphs for its AXE telephone exchanges (CW, March 20) to be installed at the rate of about 50,000 lines a year over a five-year period starting in 1982. The company's plant in Athlone will be enlarged to handle the contract, and training of additional software designers and programmers has already begun.

Datasab talks?

TALKS terminated in January between ICL and Datasab on an OEM agreement for Datasab's banking and Air Tasking display terminals have given rise to speculation that the Swedish company is up for sale. Datasab denies this, although a possible equity stake was discussed at the talks.

Troubled issue

WE apologise to our readers and advertisers for the absence again of some regular features and for the reduced news coverage in Computer Weekly. The problem was caused by circumstances beyond our control.

French terrorists attack computer firms

TWO French terrorist groups are claiming responsibility for attacks on computer companies in Toulouse last week in which one machine was totally destroyed by fire and another was seriously damaged.

First terrorist contact came from a group calling itself Direct Action, which said it had burned stored computer programs and sabotaged a computer at Philips Data Systems' office in Toulouse because it was being used to process information for the French intelligence service and armed forces. Philips has denied this.

Direct Action also claimed that it had

carried out a second attack on CII-Honeywell Bull's office in Toulouse for the same reason. A 81/DPS system and what CII described as "a lot of paper" was destroyed by fire during this incident.

Police investigating the two incidents believe that they are linked but are less certain that Direct Action was responsible.

Instead, a second terrorist group calling itself Clodo, the Committee to Liquidate or Neutralise Computers, which has also claimed responsibility for the attacks, looks a more likely candidate. It is believed to have given sufficiently good descriptions of the two computer company offices

and their contents to convince the police of the authenticity of its claim.

In a message delivered to the newspaper Liberation, Clodo said: "We are workers in computing and therefore in a good position to know the present and future dangers of computing and telecommunication."

"The computer is the favourite tool of tyrants. It serves to exploit, to control and suppress."

The Toulouse police also believe that Clodo has been keeping local IBM offices under surveillance since the beginning of March.

2900 users form Euro club for all makes

A EUROPE-WIDE society for users of all types of computer, called the European Computing Club, has been set up by the organisers of the 2900 Club. The latter already has a handful of members from other parts of Europe and its membership is not restricted to users of ICL 2900 machines. It is intended to be genuinely pan-European and not based on one manufacturer.

The chairman of the 2900 Club, Alan Boyce of Trust House Forte, told Computer Weekly that the first meeting of the European Computing Club would probably take place in about a year, probably at Munich. One likely topic to be covered would be trans-border communications, a subject thought to be of interest to a Europe-wide delegation.

Boyce stressed that the new club had no links with the Conference of European Computers User Associations, CECUA, in which the UK member is the National Computer Users Forum.

CECUA is very much a political body, being recognised by the EEC Commission as the official mouthpiece of computer users in the EEC, while the European Computing Club will avoid political involvement, according to Boyce.

Meanwhile, the 2900 Club is still going strong and has just changed its status to that of a limited company. The next meeting will be on October 6 in London when subjects to be discussed will include linking ICL machines in other makes of computer.

Macroprinters Microprices

Looking for dot-matrix printers costing a lot less than you budgeted for? Stop looking.

These three from Anadex not only offer lower initial cost, but also provide substantial savings on servicing.

For around \$500, the Anadex DP-8000 provides 80-column printing at 112 characters per second, 84 lines per minute; switch-selectable baud rates from 110 to 9,600; 100M character head life; three standard interfaces (RS-232C, current loop and parallel bit); vertical tab, form feed, skip-over perforation controls; adjustable sprockets for any paper size; self-check diagnostic test facility; 1K character buffer standard with 3K option.

For a little more, the Anadex DP-8000AP Apple-compatible version provides the

required 96-column printing at 134 characters per second, plus all the features of the DP-8000 described above.

At less than \$900, the new Anadex DP-9500 offers up to 220 character line width, with maximum printing speeds of 200 cps or 200 lpm; 150M standard or 650M optional character head life; 11x9 dot matrix capability; 'look ahead' bi-directional printing; 500 character buffer with 2.5K option, full graphics potential; communications control capability, vertical and horizontal tabs.

You won't find a better bargain.

ANNOUNCEMENT
from
HUGH PUSHEMAN ASSOCIATES LIMITED

Following recent coverage in the press on the demise of HPAC Limited, we wish to assure our clients and the industry in general that there is no connection between us and HPAC Limited.

The similarity of company names stems from the fact that "HPAC Limited" was the name adopted by the original Hugh Pushman Associates (Compilers) Limited when they were divorced by us as a subsidiary over two years ago. There has since been no financial, marketing or any other real links between the two companies.

We are now in our ninth year of operation and show continued profitable growth. We are planning and expect to achieve further growth through both established and new products and services.

HUGH PUSHEMAN ASSOCIATES LIMITED offer a wide range of skills undertaking feasibility studies; research; design and development for mini and micro computers and specialisation in telecommunications software.

HUGH PUSHEMAN ASSOCIATES LIMITED has recently announced "APCS" (Automated Business Communications System), a product that provides store and forward telex, store and forward fax, message switching and electronic mail starting at under £10,000 for a system.

HUGH PUSHEMAN ASSOCIATES LIMITED has an increasing demand for analysts and programmers with real-time technical computing experience. Applications are invited to fill positions in UK and abroad. For further information, contact:

Robin Wilkinson, Marketing Manager

**Small firms plan to
fight US dominance**

AN association of European manufacturers of small computers, peripherals and software products has been formed to help fight off US and Japanese competition, to try to equalise trade barriers with the US, and to make co-operation and trade within Europe easier.

Called the Association of the European Independent Informatics Industry, the group is being launched next week at Hannover Fair with the sponsorship of the European Commission.

Firms from six European countries have already joined including, from the UK, Data Recording Equipment, Plessey, GEC Computers and Plessey Telecommunications and Office Systems.

The existing French and West German associations of small computer manufacturers, which are becoming known as "petit informaticiens", are joining the association.

According to the association's treasurer, one aim is to try to persuade the US to drop or modify the Buy American Act which prevents foreign companies from tendering for government contracts. Failing this, Willis said, the EEC should retaliate with a Buy European Act. The group also hopes to persuade European governments to accept each other's safety standards.

Two new disc drives, a 118-megabyte fixed device and a 72-megabyte exchangeable drive are offered, with one of the fixed

● Turn to back page

Yoghourt goes better with chips

"The savings and opportunities provided by the introduction of our new system are enormous." That's the view of Fred Finlayson, Manager of Management Services with Express Dairy Foods. The new distributed processing system is one of the most ambitious in the country — with a total of 27 minicomputers serving 13 factories and 27 distribution depots. It will help Express get more dairy goods — like its Eden Vale products — to the right place at the right time.

Data Logic is implementing the project under a turnkey contract. That means software development, supply of computers and project management. It even, in this case, meant the development of special communications hardware based on microprocessors, for a more economic data network and fewer transmission errors.

Data Logic's Professional Services Division has over 100 consultants, analysts and programmers. That's one of the UK's largest groups of computing expertise. Whether your next project involves one computer or 27, shouldn't we be talking?

COMPUTERVIEW

IF the British sometimes find it difficult to understand the French, the Americans find our neighbours across the Channel equally impenetrable.

The effectiveness of France's protective policy with regard to the computer industry is underlined by a hard and baffled piece which appeared in the Wall Street Journal last week.

In it an IBM spokesman comments that the company's share of the French government market has declined from 37% to 28% over the past five years and attributes this to government support for CII-Honeywell Bull. He goes on to say that no protest has been made to the government, since "as they say in the French Foreign Legion, things could always get worse."

Companies are quoted as saying that French government interference is extremely arbitrary, some deals being allowed to go through while others, apparently similar, are blocked.

Most striking is the view attributed to the head of Univac, Jacques Dumas, who says that the best cause for US companies seeking a French base is to become a minority partner in a joint venture with a French company, in which case they would qualify for grants, cheap loans and subsidies.

"It's better," he says, "for an American company to get 49% of the profits and dividends than to be shut out of the market entirely."

That comes pretty close to being a counsel of despair — and it comes from the head of the one company which has successfully sold the French government for interfering when a steel company wanted to buy Univac and

'Go, and do thou likewise'

was forbidden to do so. Univac picked up a \$1.2 million cheque far damages.

Yet the US government does not seem to have taken any retaliatory action: which European country exports the greatest value of computers to the US each year? That's right: France, with the CII-Honeywell Bull Level 64.

It is also noteworthy that since CII-Honeywell Bull was formed in 1978 it has elected to manufacture the Honeywell Level 6 mini-computer and Level 68 and DPS 8 mainframes in France, whereas Honeywell has yet to start manufacturing a significant product of CII-Honeywell Bull origin in the US.

Clearly ICL is at present doing far too well for a full-scale partnership with a US company to be appropriate, but the British minicomputer industry might well have benefited from a direct US link.

There is an area where Britain has little to learn from the French, and that is foreign investment.

It is fashionable in some quarters to regard foreign investment as the work of the devil, stealing capital and

jobs from the British work-force. That this need not be so is amply demonstrated by two British companies, ICL and Racal.

In 1978, ICL acquired the international operations of Singer in one of the best foreign investment deals yet made. The company has since installed more System Ten computers than Singer did, and in about half the time. And the vast majority of these sales, a large proportion made overseas, were filled with System Ten computers made in England. Had ICL not made the investment, the chances of those computers being built in the UK were almost nil.

The company sensibly still builds the smaller 1380 in the US, as a means of demonstrating its commitment to the largest computer market in the world, and in order to have some kind of entrée to US government business, effectively quarantined from imports by the Buy American acts.

A year or so later, Racal acquired Milgo Corp of Florida, and has just announced that Milgo products are to be built in the UK — 23,000 modems in the first year. There is very little likelihood that these devices would have been built in the UK had not Racal taken over Milgo.

Far too much time and energy is wasted in the UK on reiterating sterile dogmas. The only sensible reason for doing anything in a particular way is because it can be demonstrated that it works. The French experience, the achievements of ICL, of Racal are only three of scores of blueprints for success which exist. The Biblical exhortation "Go, and do thou likewise" seems appropriate.

LETTERS to the EDITOR

Flying the US flag Work together

WHAT staggering news the British National Enterprise Board supports financially a US based company from New York, QI (CW, March 27), when right on the doorstep in good old Middlesex is a small private enterprise company actually finding its own cash, to make an "almost British" range of time dual-disc, Z80A, 64K microcomputers complete with a daisy printer, and all-British business software for under £8,000.

So we only supply the UK Atomic Energy Authority, universities, and businessmen, and are not yet selling to NASA. But what magic is there in that?

We, too, have a central disc store. We also have multi-user software, and a portable suitcase microcomputer with a flat screen, as well as packet switching networks with protocol converters for any machine to communicate with another.

Unfortunately we are all-British, without the glamour of New York. We don't ask favours or sell short. We appear at Compe once a year and support all our customers for the rest of the year.

The QI news makes it almost worth considering joining up with a US glamour name and just forgetting all about "getting it going in Britain."

Can somebody just tell me why entrepreneurs are trying, when the NEB just keeps up imports?

A. B. CLARKE
Managing Director
Haywood Electronic Associates
Northwood, MiddlesexHAROLD HALSEY
Chairman, London District
Institute of Internal Auditors

I WOULD like to endorse the comment by C. H. Sayer (CW, February 28) that auditors and DP professionals should work together in this important area.

The Institute of Internal Auditors is anxious to contribute and to co-operate in this important field of computer audit. The Institute's London District held a joint seminar with the British Computer Society's audit-by-computer group last month on the subject of current computer audit topics. The meeting drew a record attendance of members and non-members, registrations

totaling up to 194 persons. We hope it will be the forerunner of closer co-operation in the future.

It is clear from the response to this seminar that there is a widespread seeking for knowledge an computer auditing, and the Institute of Internal Auditors will certainly be striving to make its mark by doing all it can to meet the needs of this important area.

Apple computers, Ramington and typewriters, Hewlett-Packard calculators, and Centronics printers will all be stocked. The centrepieces, however, will be a new copier costing £1,200, aimed at fighting off Japanese competition. Selling through shops rather than direct selling is necessary with equipment in this price range, and this is the motivation behind Xerox's move.

Advice on the planning of small electronic office systems is also to be offered.

Xerox is going into the retail business, with high-street shops opening in six US cities this year selling mainly low-price copiers, but also word processors, frame computers, and office equipment both at its own make and of other manufacturers.

The two types of terminals are for typists and managers, those for the former providing text editing using their in-built intelligence, and those for the latter being relatively dumb terminals intended mainly for access to information rather than processing.

Up to 100 terminals can be in use at once. Documents can be sent from one terminal to the "electronic in-tray" of any other. File transfer from one

EMI pulls out of voice recognition

EMI has completely severed its links with the voice recognition business following the transfer of its shareholding in Threshold Technology to the German company Siemens.

Meanwhile IBM in the US has announced that its experiments with voice recognition could lead in a few years to a prototype dictation machine capable of recognising up to 2,000 words.

The first stage of EMI's withdrawal from voice recognition came last year when it sold its share in Threshold Technology's European arm, EMI Threshold, which then became Threshold International Electronics, TIE.

With about 20% of Threshold Technology, EMI was the biggest single shareholder in the US firm. That month has now fallen on Siemens, which is already the Threshold distributor in West Germany, Switzerland and Austria through its subsidiary, Computer Gesellschaft Konstanz. In its role as distributor Siemens will continue to deal through TIE, which is still based at EMI-owned premises at Hayes, West London.

IBM says that its voice recognition experiments have achieved an accuracy of 91% in transcribing speech composed of sentences drawn from a 1,000-word vocabulary. IBM points out that there are no artificial pauses between words and that they are spoken at normal speed.

Special hardware includes an acoustic processor which samples and digitises the voice waveform 20,000 times a second. Batches of 1,000 samples at a time are manipulated using a discrete Fourier transform technique to produce patterns called spectral time samples. The latter are compared with a set of 200 samples stored during an earlier training session with the speaker. The time needed for the speaker to "train" the system is about two hours although IBM believes that the projected dictation machines might require only 15 minutes' training. Software at the moment runs on a 370/168 mainframe.

Office system from Prime

NEW terminals from Ontel and Bellini, and the Nippon Electric shuttlecock printer, are the hardware additions announced by Prime to make up its electronic office system, which has now been officially launched.

The package, exclusively rebranded in Computer Weekly (March 13), is called the Office Automation System and consists of these peripherals and a new software, run with a standard Prime minicomputer and fixed or cartridge discs.

Word processing and electronic mail are the main features of the system, with extra such as calendar management, correspondence management, and rough word-for-word language translation using 60,000-word dictionaries held on disc. The system does not handle voice, in contrast to Datapoint's recently-announced competing system (CW, March 6), but this is being worked on for a future release.

Also in the pipeline are view-data facilities, allowing either the use of the system for private viewdata, or access from its terminals to the public Prestel service. A prototype system doing this is already running at the Prime R&D centre in Bedford.

Since the new office system requires a sizeable mini as its CPU, running under the Primos operating system, a small configuration is not economical, the minimum practical number of stations being about 20. This will cost over £200,000.

The two types of terminals are for typists and managers, those for the former providing text editing using their in-built intelligence, and those for the latter being relatively dumb terminals intended mainly for access to information rather than processing.

Up to 100 terminals can be in use at once. Documents can be sent from one terminal to the "electronic in-tray" of any other. File transfer from one

Japan in office of future race

Baxton

THE Japanese have joined the race to provide the office of the future in the UK with the setting up in Britain by Matsushita of a new company, Panasonic Business Equipment, to market a wide range of office products separately from the consumer electronics range. It expects to announce soon a hand-held computer for businessmen, including a calculator, translator, memo steno, and links to communications and a printer.

A special-purpose small business system is being launched at the Hannover Fair this week. Called the BC-5000, it has an array of 144 function keys on which the user can put his own changeable perspex labels for whatever job is being done.

This unit joins Matsushita's existing range of four small business machines (CW, January 17) which with the other Intercom, dictating and facsimile equipment have been marketed until now in the UK by Teletronic.

Teletronic has been absorbed into Panasonic Business Equipment. Its founder John Baxton (pictured above) is managing director of the new firm. The significance of the new arrangement is that the business equipment firm has a direct link back to Japan and does not have to go through the National Panasonic hi-fi and television group.

The hand-held computer is being produced by a new division at Matsushita which has already come up with a hand-held translator. This can store 1,000 words of three different languages, and up to 48 simple phrases. Another new product to come later this year is a packet data entry terminal called Telacommander.

Panasonic will be selling entirely through distributors, and the Curry's hi-fi chain may be one of these.

Datapoint rescue for troubled Inforex

SMALL systems and networking specialist Datapoint has reached agreement in principle to acquire the troubled key-disc manufacturer Inforex. The Burlington, Massachusetts company operates at present under the protection of Chapter 11 of the US federal bankruptcy laws.

Although the parent company is in trouble, the eight European Inforex subsidiaries, which contribute about half the company's turnover, are profitable, and under the agreement, Datapoint has an option to buy these rather than an outright commitment. However if Datapoint did buy the European subsidiaries it would call into question the present arrangement under which Datapoint products are marketed in Europe by associate companies of TRW Corp, such as Ventek in the UK and Matra Informatique in France.

Twisted comms

WE are all in the information business, right? Communication is what computers are all about, agreed? They why do you suppose so many of our colleagues seem to treat writing as a sort of latter-day Battle of the Somme?

I publish an occasional column of gems of obfuscation, but for a long time I haven't seen anything as baffling as this piece, sent to me by Mike Taylor of Stewart Wrightson Management Services. It is from International Business Equipment, and is by one Linda Tilton, a vice-president of Formati Systems Inc. of Chattanooga, Tennessee.

Word processing centres have growing pains. There are five principal causes of growing pains: individualism in operators, coordination of machine models, originator-operator ratio, personnel turnover and expansion of the business. When the centre is small, these areas can be handled informally and solution altered verbally. Later, the need to impose discipline and communicate efficiently becomes necessary.

I am glad to see from the last sentence that Ms Tilton agrees (I think) with the principle of what I say, even though she

does not practice what she preaches. Let me say right away that "expansion of the business" is not as obscure as it sounds; she is not talking about trouble with the central leasing, Ballerplate letters in word processing jargon are those made up of pre-stored standard paragraphs.

What really baffles me is this "originator-operator ratio." Do you suppose it has something to do with the typists playing transmitters while they work? Have you got private word processing centres with that slinking feeling like Radio Caroline?

The research was funded by the US Office of Naval Research's engineering psychology programme. Let us, for the purpose of this column, concentrate on the results and recommendations.

"The most significant finding from the command usage analysis was that text-editing commands accounted for over three-quarters of all the commands issued. This might suggest that much of the editing is due to correction of errors which more powerful language analysers could detect and help pinpoint accurately.

"We recommend that 'semantic checking' facilities be developed for use within language processors to aid in the detection of these conceptual errors, paralleling the facilities for detecting syntactic errors."

The study ascertained that "control specification" — that is, program decision points — are a "high-probability difficulty factor."

They tested a number of alternative methods of expressing program control being used in the computer sciences literature in favour of the IF (then ELSE) structure. "We found that this was the most difficult technique to learn and to use correctly."

The constructs found superior were called BRANCH (one-dimensional lists) and FLOW (graphical specification). Next a "PROCEDURE TABLE", similar to the above mentioned BRANCH structure, was tested. Its structure is "similar to a (90-degree rotated) decision table."

Even though "participants experienced difficulty in using decision tables" the PROCEDURE TABLES' performance was found to be significantly superior to that with the other types of control structures, with perfect performance found in almost all conditions over all

GILB'S MYTHODOLOGY

Towards a natural menu-driven language...

I WOULD like to share some interesting results of recent IBM research into programming and program design. Here I can give a brief idea of the many ideas and their background, but the report is available on request.

The one I refer to here is, Lance Miller's Behavioral Studies of the Programming Process (IBM RC 7367, 72 pages). The research was performed at the IBM Thomas J. Watson Research Labs in New York by a large research team.

To get some overview first: the report has something to say about increased naturalness of the person-to-computer interface; the effectiveness of various logic structures in logic design and programming — effectiveness for understanding by people; new types of program maintenance documentation; and automated aids for design specification.

The research was funded by the US Office of Naval Research's engineering psychology programme. Let us, for the purpose of this column, concentrate on the results and recommendations.

"The most significant finding from the command usage analysis was that text-editing commands accounted for over three-quarters of all the commands issued. This might suggest that much of the editing is due to correction of errors which more powerful language analysers could detect and help pinpoint accurately.

"We recommend that 'semantic checking' facilities be developed for use within language processors to aid in the detection of these conceptual errors, paralleling the facilities for detecting syntactic errors."

The study ascertained that "control specification" — that is, program decision points — are a "high-probability difficulty factor."

They tested a number of alternative methods of expressing program control being used in the computer sciences literature in favour of the IF (then ELSE) structure. "We found that this was the most difficult technique to learn and to use correctly."

The constructs found superior were called BRANCH (one-dimensional lists) and FLOW (graphical specification). Next a "PROCEDURE TABLE", similar to the above mentioned BRANCH structure, was tested. Its structure is "similar to a (90-degree rotated) decision table."

Even though "participants experienced difficulty in using decision tables" the PROCEDURE TABLES' performance was found to be significantly superior to that with the other types of control structures, with perfect performance found in almost all conditions over all

problems, and further the provision of this tabular structure was of key importance in assisting performance (see Table 1).

The Miller report recommends "that a structured technique like the procedure table be used for program coding" under certain conditions which they "estimate that a large portion of the programming tasks in businesses, governmental services, and the armed forces, would meet."

They also note that a "menu" of conditions should be provided by the system, rather than

A six-level indented structured program was more naturally expressed as: "PACK LARGE RED DECORATIONS 12 TO A BOX. MAKE UP A TOTAL OF 200 BOXES. STOP AT 5:00 IF NOT FINISHED. BE SURE TO PACK ONLY THE UNBROKEN ONES."

Their conclusion is that "a language interface based on a natural but considerably restricted syntax and lexicon might well be an acceptable and preferred alternative to the present programming-like interfaces."

Database inquiry languages were examined as well as proce-

LABEL	CONDITIONS	ACTION(S)	GOTO
A1	TEMP TOO LOW?	PUSH "HEATER ON" AND WAIT 1 MINUTE	A1
		PUSH "HEATER OFF" AND WAIT 2 MINUTES	A1

Table 1. The procedure table concept.

allowing people to specify conditional logic in their own terms directly.

The reason for this was the discovery that many errors were due to natural human logic specifications which could not be correctly interpreted by the relatively inflexible database query systems or compilers.

The menu is a way of informing people about valid language constructs, without training them in advance, and without trying to solve the problem of all frequent human variations of logic specification.

Moving into the sector of "natural language programming and communication" the researchers discovered that people specifying their problems for computer solution, in half of the trained programmers involved, "were more concerned with data manipulation than with control factors, preference for aggregate data operations rather than iterative, for example, 'Find all those who'."

To make a long story short, contemporary program logic, such as structured and indented GOTO-less algorithms, are not the natural way of expressing program logic.

This confusion between

Tom Gilb is an independent consultant, lecturer and author on computing topics.

systems architecture in general and logic specification, according to fixed strategies, is widespread in our profession at the moment. Miller and his colleagues are almost forgiven for their temporary lapse in mentioning logicware specification techniques under such a broad heading as Design Philosophies.

Some specific software design aids are recommended. The most interesting suggestion is a hierarchical program editor which is described in great detail and warmly touted as a fundamental solution.

The authors point out that most program and pseudo-code editor systems are essentially sequential in nature, but that a facility for inquiring and modifying indented hierarchical text would "offer the greatest potential for facilitating the design process". They also mention that they have already developed a prototype editor, although it is not optimised.

There is a section investigating behaviour related to maintenance programming which examines the effects of new types of graphic or tabular documentation, to help programmers understand programs.

The favoured solution was a matrix of intra-module interaction, but none of the results was conclusive.

Calcomp throws in anti-trust towel

AFTER nearly seven years of struggle, Calcomp has effectively thrown in the towel in its anti-trust contest with IBM. Calcomp's parent company, Sanders Associates, has decided not to appeal to the US Supreme Court against last year's decision by the Ninth Circuit Court of Appeals that confirmed the verdict in favour of IBM passed in the original trial more than three years ago.

The Calcomp case was originally filed in October, 1973 and became the obsession of Calcomp's chairman and chief executive of that time, Lester Kilpatrick.

The case came to trial in the Los Angeles Federal District Court in November, 1976 but three months later presiding judge Ray McNichols, directed the jury to accept an IBM motion that there was no case to answer.

Calcomp is now mostly devoted to computer graphics having dropped out of the IBM compatible peripheral business some years ago and having sold its operation manufacturing big OEM disc drives to Xerox.

Calcomp dramatically extends the range of graphics pro-

ducts already manufactured by Sanders Associates. Sanders dropped its own \$255 million anti-trust action against IBM early in 1977 in return for a \$10 million development contract from IBM. The Sanders case charged IBM with damaging its one-time subsidiary, Sanders Data Systems, by temporarily withdrawing support for 2260 video terminals.

IBM's first major anti-trust victory was against TALEX five years ago and in 1978 the Memorandum of Understanding ended in a mis-trial after the jury failed to reach a unanimous verdict. The judge then issued a directed verdict in favour of IBM.

Speech I/O 'will soon be widespread'

HOW would you feel if the only way you could communicate with others was to type letters and watch them appear on a display? This question was posed by Eric Coren, vice-president of Integrated Computer Systems, when introducing a four-day training course on speech recognition and synthesis. The course opened in the US this month and moves to Europe in May.

Garen added that people interested in this with machine communications because machines were fairly new and very common, but progress in three areas in the last three years was beginning to make voice input/output available, and it would soon be widespread.

The three areas Garen mentioned were improvements in pattern recognition and digital signal processing; VLSI technology; and the understanding of speech recognition and synthesis techniques.

The course, aimed at design engineers and programmers, costs £470. It covers the techniques involved such as digital

signal processing and pattern recognition and also reviews currently available hardware.

General Electric, Philips and General Motors are among the firms which have asked ICL for courses in this area, and several universities, IBM and Texas Instruments have advertised for experienced voice research workers.

Bell Laboratories has a system whose trial applications include an automated information service. Qnasar, the consumer electronics division of Motorola, plans to launch by the autumn a micro-wave oven which will speak to the user.

Allen Bradley and Cincinnati Milacron are developing voice synthesis systems to enable machine tools to make announcements.

Talks between Texas Instruments and General Motors may result in "autentic nuttur" synthesising such remarks as "Are you wearing your seat belt?" "Aren't you driving a little fast for these weather conditions?" and "What's that I smell on your breath?"

Lottery boost for Burroughs

Syslime moves into new Dublin offices

Syslime's marketing company in Ireland has moved into new Dublin premises which were opened earlier this month by the director-general of the Irish Management Institute, Ivor Kenny. He is seen here flanked by the two top men at Syslime, managing director John Gow (left) and chairman John Parkinson. The new premises will house 20 staff whose activities will include supporting the 14 customers picked up by Syslime in Ireland since it set up there two years ago. Customers for Syslime's turnkey systems include the Irish Times and Shell Chemicals.

THE French Loto National, a division of the national lottery, has given Burroughs one of its biggest European orders. Two large-scale B7800 mainframes are to be installed, one in Paris and one in Marseilles to capture "jeux" as they are made in real time. Loto National is a gambling game in which the player buys a card, writes down his own numbers and hands it back to the seller, usually a tobacconist.

Special terminals are to be developed by CSEE, Compagnie de Signaux et d'Entreprises Electroniques and, if a pilot project with 100 terminals proves successful, it is planned to equip all 8,000 points of sale.

This new Prime System has been designed to improve the productivity of managers, secretaries, clerical and technical staff of large commercial and industrial organisations. It has already revolutionised procedures in national and international businesses.

Prime's Office Automation System will run on any Prime 50 series computer. It combines the features of word processing, comprehensive electronic mail, document management, administrative support, and text management with the routine data processing of an advanced business.

Management Communications and Support: Electronic mail with capabilities to announce, send, receive, acknowledge, forward, or redirect. Document management including filing, retrieval and archiving. Extensive management planning and scheduling functions including diaries, message logging and reminders.

Word Processing: Ability to create, store, and retrieve a document; update, modify, and delete that document. Standard letter libraries for batch correspondence.

Text Management: Extensive dictionary with initial 60,000 word vocabulary; automatic proofreading, spelling check, hyphenation, multi-lingual translation.

PRIME Computer

MICROSTAR

the power-packed multi-user micro that outshines the rest

The powerful MICROSTAR Computer System is suited to a wide range of applications for small business data processing including accounting, word processing and inventory control.

Business Packages are readily available — Sales, Purchasing, General Ledger, Stock Control and Payroll. In addition the FLEXITEX Word Processing allows the preparation of business letters and proposals. The UPDATE report generator gives users the facility to retrieve data and customise reports quickly.

Professional Systems Builders choose Microstar for its price and performance. It is a compact floppy

diskette and hard disk based, micro system featuring the STARDOS multi-user operating system. Stardos allows up to three interactive jobs and one background job to run concurrently on up to three peripherals — e.g. two visual displays and a terminal/typewriter printer.

Prices start from £4800 and typical complete systems from around £8000.

Write or call us for more information about the Microstar Computer System and the name of your nearest Dealer.

ANADIX DP8000
Exceptional value and high reliability. 84 lines per minute, 112 cps. Parallel and serial interfaces as standard. 96 ASCII set, 9 x 7 font. Variable line spacing. Form handling facilities. 1K buffer store. Options include 2K extra store IEEE interface.
from only **£516**

DIGITAL LA34
30 cps desk top terminal. Roll feed, paper width from 3-14 inches. 84 interface. 4 selectable character widths. Full 96 ASCII character set. 7 x 9 dot matrix. Options include a 20mA interface, interface to accept sprocket feed paper and numeric keypad.
from only **£826**

LEAR SIEGLER ADM-3A
The most popular visual display in the world. 1940 character screen capacity. Cursor addressing. Dual interface. Auxiliary port. Wide range of speed and word formats. Options include Tektronix 4010 compatible graphics.
from only **£570**

LEAR SIEGLER ADM-31
Lowest VDU with two page display and full editing facilities. Dual interface. 9600 baud data rates. Upper/lower case character set. Cursor addressing, editing, protected fields, dual intensity. Optional polling and addressing, printer port.
from only **£795**

TELETYPE 43
Versatile, economic and reliable. 30 cps, serial interface keyboard printer. 132 or 80 columns. 96 ASCII set, 9 x 7 font. Chip, high quality printer. Microprocessor controlled. Portable version. Character set options.
from only **£799**

TYPEWRITER TERMINAL
Two machines for the price of one. Type-writer style interface for single or dual documents, letters etc. Pin feed for continuous business stationery. Electric typewriter keyboard layout and touch. Left and right hand margin setting. Chip, high quality printer.
from only **£825**

TECHTRAN 950
Mass data storage, high speed retrieval and intelligent data collection. Micro-processor control. 200K character storage per file. RS232 interface. Switch selectable speeds. Easy life oriented mass data storage. The 950 is a powerful data editor, high speed search and editing.
from only **£995**

TEXAS 810
Compact 180 cps 132 column printer. Optimised bi-directional printing. Adjustable tractor feeds, 3 - 15 inches. 9 x 7 dot matrix. RS232 interface. Remote control options. Other serial and parallel interface options. Compressed print option.
from only **£1392**

Ansi looks at real time and graphics for Fortran

THE technical committee for Fortran under ANSI X3J3 is to consider real time and graphics applications as part of the Core Plus modules scheme for the language.

Links with US and international committees involved in real time Fortran applications continue and a task group for multi-tasking is to be formed. It will work on standards in the process control area in close co-ordination with the Instrument Society of America and the European Workshop on Industrial Control Systems. There is also to be a formal link between the committee and the ANSI technical committee on graphics.

The next Ansi Fortran spec is expected in 1985. Anyone interested in any of the areas mentioned above should contact Loren Meissner, CSAM-508, Lawrence Berkeley Labs, Berkeley, California, 94720, US.

Puzzler

1	2	3	2	1
3	4	5	4	3
2	5	2	1	4
4	1	3	4	5
2	5	1	5	3

THE problem here is to slice the square into five five-cell pieces, such that each piece contains all five different numbers. All divisions must follow the grid lines, and each piece must be "preparily" formed — i.e. cells joined at one corner-point only are not allowed. See page 22 for solution.

On the subject of consecutive squares (Puzzler, March 20), J. R. Heise makes the point that the smaller of the two square roots involved can always be determined simply by dividing the difference by 2.

● Puzzler is blushing with embarrassment. In last week's problem, involving the relocation of a series of counters he fingers stumbled on the typewriter and some of the instructions were left out. The third sentence should have read, "Each move must consist of picking up a counter, moving it left or right over exactly three other counters, which need not all be in the same cell, and finishing in an empty cell." Sorry.

Make an appointment with London's new Micro Technology Centre

Right in the heart of London, there is a permanent micro exhibition where you can obtain professional advice and buy micro hardware and software.

Some household micro names are on show: Intel, Mostek, Zilog, Apple, Cromemco, North Star, microNova. And lots of peripheral names too: Anadex, Axiom, Lear Siegler, Okidata, Printium, Sanyo, Tiendcom.

This is your invitation to visit the Centre. Unhurried by exhibition crush, discuss your needs in depth, browse over books, arrange training and place your Micro systems order.

Digitus

Make an appointment
today with:
Digitus Ltd

Tel 01-406 6761

PS Through Digitus MicroSkill we can also provide countrywide micro engineering, design and programming support.

CUT PRICE M.I.B.F. PRINTERS

If you buy Centronics printers then compare these prices with what you pay now! We'll not only cut your costs, we'll better your delivery too.

Centronics	1 off (£ each)	10 off (£ each)
701 (80 cps)	1038	948
702 (120 cps)	1217	1108
703 (180 cps)	1548	1421
8300 (300 lpm)	3895	3617
8800 (800 lpm)	5419	4975

How? Well our stocks are better than most and our lead times are shorter too! We also specialise in other advanced peripherals such as:

The MIP 600, 600 cps matrix printer. Amazing speed, reliable performance with good quality £2600*

The 25 megabyte disk (Perio) A proven and reliable performer £2840*

Let the MIBF OEM service work for you.

SUPPLIERS TO BRITAIN'S COMPUTER INDUSTRY

New aids for finite element analysis

THE technical computing bureau SIA and the University Computing Company have both announced extensions to their facilities for finite element.

SIA recently released a new version of its Finite Element Modelling and Analysis Language for Engineers, Female, designed to act as an interface between the engineer and the analysis package so that models can be defined and results analysed, and finally integrated into the design procedure.

Among the new functional modules added to the Female library is Automesh, which creates meshes from simple point and line definitions.

At the same time SIA released Update 87 of Ansys, a system for structural and heat transfer analyses which can be used through Female, which now includes a procedure which calculates critical loads and Eigenvalue buckling analysis. The systems use Tektronix and Calcomp graphical output facilities.

The UCC products Femgen and Femview are pre and post processor programs in the structural analysis field which have just been made available to UCC's European network.

Femgen is a finite element mesh generator using the "top-down" approach to analysing a structure in terms of points, lines and surfaces. Femview provides aids to visualisation and helps to interpret the volumes of data produced by finite element analysis.

SOFT BITS Going Forth to win

THE high level computer language Forth was used by Sinar Agritex, winner of the recent NRDC-sponsored British Micro-processor Competition (CW, March 27) to develop both the hardware and the software on its award-winning grain and seed monitor.

Forth is a structured programming language which permits interactive programming, and according to the project engineer at Sinar Agritex, speeded the development stage of the project considerably.

THE City-based software house, Harrison Computer Services, has won a contract in the US worth \$180,000 to aid in the development of a real time banking system to be installed on a NCR Criterion for a Middle East bank. The contract was awarded by Florida systems house Anncomp Inc.

ASYSTEM written by surveyors and engineers to streamline the job of hand-plotting survey plans and contract drawings is available from Ediplex Computer Services of Bucks. It runs on a Wang 2200 VP with a video terminal and flatbed plotter, and costs a minimum of around £28,000.

THE shared tape allocation manager STAM marketed by Software Implementation has been enhanced to automate the allocation of shared mountable disc devices at IBM installations. The product aims to reduce human error by relieving operators of the task of tape and disc allocation in multi-CPU installations.

UK debut for Aussie system

A FINANCIAL and business control system developed in Australia is to be marketed in the UK by Pashan Management Services. The system, called the Pashan system, is a 16M system 32, system 34 and system 36, and runs in batch mode or interactively on the System 34. It was developed by Pashan Management Services, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

Amdahl boost for I.P. Sharp

THE APL time sharing service provided by I. P. Sharp has been upgraded following the delivery of an Amdahl V8 to replace one of the Amdahl 470/V8-11's, installed only a year ago.

The second V8, installed in 1978, was intended to cater for the company's growth until the spring of 1981. However, increased demand for APL resources in Europe and North

America has led to early expansion of what, according to I. P. Sharp, is already the largest APL facility in the world.

The new Amdahl V8 is said to be capable of almost twice the processing power of the V8, and the main memory of the facility has been increased by four million bytes, anticipating further increases in demand over the next year.

Workspace aids for APL programming

APL specialist consultancy Cocking and Drury has introduced three APL workspace aids, WSDOC, CONSCHK and WSSEARCH. In response to a growing demand for APL programming, the products aim to provide the sort of support that programmers take for granted with more explicit high-level languages.

APL's flexibility and conciseness brings its own problems when it comes to debugging and documentation — especially when dealing with programs written by other people, as, according to enthusiasts for the language, APL not only caters for individual flair but encourages it.

Using WSDOC, an existing APL system can be documented prior to modification or maintenance. It lists all the functions and variables in an APL workspace, defining a function and the tree to which it belongs, and if necessary producing a full reference listing.

CONSCHK compares two workspaces and identifies the differences between them, finding functions and variables which are present in both in different forms, or present in one and not the other.

WSSEARCH performs global searches and replacements for given text strings or expressions.

A package consisting of five workspaces including WSDOC, WSSEARCH and CONSCHK is available from Cocking and Drury with full documentation and unlocked code for £1,000 plus VAT and an annual maintenance fee.

First in UK

THE UK arm of Scientific Time Sharing, APL-Plus, is running the first installation of APL-Plus VM on an IBM 3031 at Roneo Vickers, the office equipment supplier. APL-Plus was made available for in-house use over a year ago (CW, January 18, 1979).

MEMOREX

IBM Users

Up to 25% more System Throughput

With the use of ever larger disc systems, the chief limitation to performance has become the String Controller. A busy controller simply locks out all the rest of the string.

The Memorex IDI, Intelligent Dual Interface, solves the problem. It provides two data transfer paths for each drive in the string, to allow simultaneous data transfer between two storage control units and any two spindles on the same string.

In practice, this can give increases of throughput up to 25%. It also gives automatic back-up in the event of string controller failure, plus much more configuration flexibility, especially when strings are shared between two CPUs.

IDI runs with standard IBM or Memorex storage control units and standard IBM operating software. It is suitable for existing Memorex 100, 200, and 317.5Mb drives, as well as the new 3652 double-density 635Mb drive.

Contact Tony Hammett, Sales Director for full details. Memorex UK Ltd, 96-104 Church Street, Staines, Middlesex. Telephone (0784) 51488 Telex 935013.

MEMOREX

PEOPLE and EVENTS

Senior appointments at Data Logic

WITH the restructuring of Data Logic's professional services division, several senior appointments have been announced. This follows the company's acquisition last year of Square One Computer Services.

The appointments include those of Richard Green and Robin Davies who both become regional managers.

Derek Alway, a co-founder of Square One, also becomes a regional manager and Jim Phillip is appointed business development manager.

Another co-founder of Square One, Paul Hill, assumes the position of services manager.

Frank Patterson has become a sales executive with Vydec, part of Exxon Information Systems.

Steve Gardiner has been appointed chief engineer with Base Ten Systems, where he will be responsible for all aspects of development and design engineering. He has been with the company for four years, his most recent position being that of principal design engineer.

Ian Stewart, formerly a salesman with Systime, has been chosen to head the launch of Qantel computer systems in Scotland for General Computer Systems.

Honeywell to sponsor concert

THE first performance of a new flute concerto by young British composer Nigel Osborne is one of the highlights of a South Bank concert to be held on May 28. The concert is sponsored by Honeywell Information Systems.

Other works to be performed at the concert include Symphony No 22 by Haydn and Flute Concerto No 2 by Mozart. The concert will be given by The City of London Symphony conducted by Richard Hickox.

Ian Skelly has joined CMC's technical support division. He formerly worked for ITT.

Andy Lowe has been appointed sales manager for Monotype Communications' new hotel division. Lowe has been involved with many aspects of the catering industry, and while studying for his degree in business administration made a study of marketing strategies of UK electronic companies in association with Butler Cox and Partners.

Neil Kennedy has joined Compeda as computer manager. He was previously systems manager at the Science Research Council.

John Lawson has become data centre manager for GMS Computing. He was formerly in charge of GMS' technical support.

NETWORKS '80

International Conference
London
3-5 June 1980

Networks '80 will examine the development and use of data networks into the mid 80's. A programme of 50 papers by authoritative speakers from 14 countries will consider current developments in depth. They will provide delegates with an up-to-date understanding of systems and services that are likely to become available during the 1980's.

Topics to be discussed will include:
Experience of Networks
X25 & X75 Implementation
Open Systems Architecture
Interfacing to New Networks Standards
Interprocess Communication and File Transfer
Terminal Protocols and Design
Teletex and Videotex
Common User Networks
Local Networks
Network Design and Control
Integration of Communication Services

YESTERDAY,
SPERRY UNIVAC INTRODUCED
THE COMPUTER SYSTEM OF TOMORROW.

We listened to what people had to say about what they want from a small general purpose computer system. They all said they wanted one which can grow with a company and accommodate its expanding needs. The direct result was the new Sperry Univac System 80.

System 80 talks to you. The dialogues are easily understood, and you don't have to remember program names or codes because System 80 presents you with a "menu" from which you select the required operation.

System 80 won't interrupt with advice when it's not needed, nor provide complex instructions for trained, expert users who don't need it. However it will provide detailed instructions for people with not much experience when they do need it.

System 80 guides you. Preformatted displays tell you exactly how and where to enter the input data and responds with easily read and understood displays.

System 80 spots mistakes. If you make an error, System 80 tells you, and if you can't resolve the problem, it'll help you diagnose it.

System 80 is economical. Thanks to the latest technology, it uses less power and space than previous systems of comparable performance. System 80 costs a lot less than you would imagine and is still the most comprehensive system you'll find for the price anywhere.

System 80 is the computer system of tomorrow, because whatever happens to you and your company in the future, it's a system which will grow and adapt with you.

To find out more about System 80 and what it can offer you, fill in the coupon and send for the literature. You'll see how by listening to you, we've come up with what you want.

To: Publicity Department, Sperry Univac,
65 Holborn Viaduct, London EC1A 2BS

The world's widest range of Dot Matrix Printers

Today's Dot Matrix printers are providing answers to more and more computer print out problems. Their high speed, uniform print quality, lack of routine maintenance and low number of moving parts (and hence high reliability) all contribute to making the user's life an easier one.

Mannesmann-Tally now manufacture the world's widest range of Dot Matrix Computer Printers. Our comprehensive range covers print speeds from 40-160 characters per second, including:

Line Printers
12000 (200 lpm), 12000 (300 lpm), 12000 (500 lpm)
All offering superb reliability and uniform print quality at reasonable cost.

Serial Needle Printers
80 to 64 columns, 7 or 9 needle head, including 6000 and 12000 printing capabilities — more options than its price tag.

2400 Baud Printer Terminals
The 14x2 programable terminal is simply a printer with a terminal. In every print speed, we use the optimum technology for the job.

Specialised Printers
For various fiscal and postbook printing applications, we can offer very specific Dot Matrix Printers. And for many of our standard products, we can provide special paper handling options including cut-sheet feed and short-form tear off capabilities.

Mannesmann-Tally printers interface with DEC, Data General, Burroughs, ICL, IBM, Univac and most other mini and micro computers. Simple microprocessor based design and mechanical simplicity give continuous flexible performance with no routine maintenance. Mannesmann-Tally's field service network will provide direct customer support throughout Europe.

Mannesmann-Tally is a subsidiary of Mannesmann AG, one of the world's 100 largest companies. We have printer manufacturing plants in the USA, Germany and Austria.

To increase your Dot Matrix printer fleet, why not try Mannesmann-Tally. The chances are, you'll need to go no further.

Mannesmann-Tally Printers are also available through the following authorised distributors:

OP SPOT

Courses that suit both operator and installation

IT is an unfortunate fact of the typical operator's life that he gets very little in the way of formal training and courses.

He is expected to acquire his skills in the computer room by watching and putting questions to his senior and more technically able colleagues.

The typical operations manager isn't much help, either. On requesting some formal training, the operator is told that the site can't afford to give him time off and that the manufacturer's courses don't really fit the installation's needs.

What these managers often fail to mention is that certain companies do run courses which meet the needs of operator and installation alike.

BOC Datasolve, for example, provides a series of courses relating to IBM and ICL hardware and software. Alan Peck, who is head of operations and software training at Datasolve's customer service centre in Old Park Lane, told me:

"The courses are for customers' staff and our own people. Most of the courses run here at the centre are five days long. We usually limit them to 12 students per course."

"We also do on-site specials — one of our tutors will go along to the customer's site to find out exactly what they need. He'll then spend a couple of weeks setting it up before going back and running it at the installation."

"Then we do a course for beginners. The students get a week's theory, then spend a couple of days at our Oxford Circus site under the supervision of a tutor, learning how to load printers and mount discs."

In the main, however, the Datasolve courses are aimed at staff with experience of working in operations. On the ICL side, they run a 1900 to 2900 conversion course, 2900 basic and advanced, 2900 system control language, and a 2900 telecommunications course which will be available from May.

The IBM courses fall into two categories: operations and software. The operations courses lean heavily towards theory, and cover MVS basic and advanced, 370 hardware and software concepts, and an IBM-based course on TP concepts.

"In the MVS basic operations course we go over the history of operating systems, showing how and why they have developed. We also show how jobs go through the system, explaining about the reader, initiator and writer procedures, and discuss the use of systems commands."

The MVS advanced course covers such matters as the theory of virtual storage, job re-starts, dump cracking and the basics of the IBM Assembler programming language. "Assembler tends to be the most popular part of the course. It gives the operator a deeper understanding of how the machine works."

The software courses — OS/VS1 job control language, OS/VS utilities and VSM — include more practical work, jobs being submitted via RJE to an Amdahl 470/V6 at Datasolve's site in Sunbury. "OS JCL is our most heavily subscribed course. It includes the punching and running of one, three, five and six step jobs. Generation data groups are included."

"We submit jobs through RJE. The course tutor checks each job before it's submitted to the system."

The centre has six tutors, four IBM and two ICL, who are recruited at technical support and shift supervisor level. In addition to having technical expertise, they must also be able to put ideas across to about 10 people at a time.

Said Peck, "We recruit from the outside as well as internally. Our own courses give us the opportunity for talent spotting if need be."

"Eighteen months or so ago we had trouble finding tutors, but not any more. Now we get people contacting us, asking for jobs. I've got a waiting list of three and they are at shift supervisor level."

Applicants undergo what Peck describes as "a baptism of fire" — they give a test presentation under the discerning eyes of experienced tutors.

Said Peck, "Some people are very articulate in a one-to-one situation but dry up in front of a group. Most people rise to the challenge."

Trainee, or assistant tutors, as the new recruits are called, attend any ICL or IBM courses they need, and go on a presentation course run by the British Association for Commercial and Industrial Education.

Chris Turner, an ICL tutor who has been at the centre for some 18 months, told me: "On the BACIE course they tell you to talk clearly, be as natural as possible and make sure the students understand what you're trying to explain."

by Bernard Allen

Nowhere to go at tea-break

Peck

your knowledge."

According to Turner, the tutor tries to find out as much as he can about the students before the course and treats them as individuals.

"You've got to know each student's level of knowledge and what they hope to get out of the course."

The tutor must keep in touch with what's going on in the industry and does so in several ways.

Peck told me, "Every now and again they spend a few weeks working in an area such as technical support. It keeps them in touch with developments and sharpens their skills."

"It was good to see you telling us operators to take as many breaks as possible during the evening and night shifts (CW, February 14)."

"The problem is that we have nowhere, aside from the manager's office, to spend such breaks. What do you think of that?"

So writes an operator who works at a small installation. The day and evening shifts present no problems for the operators — they get some food and liquid refreshment in the public house nearby. But on the night shift it's a choice of bring your own food or starve.

In my opinion, it's important that the operators have somewhere to rest and eat their food. It should be as far away from the noise and bustle of the computer room as possible. Why not ask to use the canteen facilities on evenings and nights as well as the day shift?

AL New from NEWBURY

Smart micro-based Visual Display Terminal Model 7000/7000C

- Teletype compatible
- 24 lines of 80 characters per line
- Selectable baud rates from 50 to 19,200 baud
- CDTT V24 or current loop interface
- Selectable half or full duplex
- Green phosphor display
- Plus XY cursor address and page mode facility on model 7000C
- Single end user price from £495

Matrix Printer Model 8300

- 125 CPS Printing speed
- CDTT V24 (RS232) interface
- ASCII 96 character set
- 80 characters per line
- Pin-feed platen
- Single end user price £460

All prices include modem and power cables ready to plug in plus free delivery in UK.

MICRO NEWS

Texas introduces a talking home computer

TEXAS Instruments has introduced its talking home computer, taking its first step into what the company sees as the "home information systems revolution." The TI 99/4 microcomputer is planned to "move the mystique" of computing that exists in the consumer market.

Following its initial launch in the US last year (CW, June 14, 1979), the slender 89/4 has now been officially introduced on to the UK consumer market, with several accessories, including the speech synthesis peripheral, and a set of TI Basic software command modules.

These solid state command modules, which cost between £17 and £45 depending on the number of ROM chips required, allow almost anyone to operate the system successfully. Mike Lench, marketing manager of TI's European consumer division, claims that even children as young as three or four could use it.

Various software projects including meal-planning, health exercises, lessons in grammar

and financial planning will be available in the module form. According to TI the complete set meets the interests of the UK market. Top of the list with highest interest value is education, followed by entertainment and personal and home management.

The titles immediately available include Pre-school Early Learning Fun, Beginning Grammar, Number Magic, Household Money Management, Personal Record Keeping, Statistics, Diagnostic, Video Games and Video Chess.

Talking originates from a speech synthesis module which holds a general vocabulary of 373 words. Extensions to this will be available on plug-in modules holding specialist words like engineering and medical terms.

For a basic cost of about £95, sentences are formed from strings of words producing a quality of sound that leaves room for improvement. The first module to use speech, Early Reading, will be available soon. Meanwhile the system can be programmed to talk to the user.

Other accessories include an RS-232 interface for £150, which provides two V24 ports each with a programmable baud rate and choice of format. Floppy disc storage consisting of a disc controller and up to three 90K-byte mini floppy drives, will be available in the summer.

For a cost of £980 the system comprises a 14in colour monitor, which can be used as a basic television, and the 99/4 console, which contains 16K of RAM, 28K of ROM storing the operating system, a sound

generator and an equation calculator.

An impressive overall effect is created with the 16-colour graphics capability that enables the user to create his own characters and animated displays, and the music and sound effects used throughout the command modules.

Tape interface for Z2-H

INTERFACING to enable the EMI 8800 magnetic tape drive to be used with Cromemco's Z2-H S100 microcomputer system is now available from Benchmark Computer Systems of St Austell, Cornwall.

It enables back-up copies to be taken from the Winchester disc drive of the Z2-H, and provides a capability for off-loading pro-

TV games Top 20

WAR and sport appear to be top of the pops in microprocessor-based TV games. Atari, distributed in the UK by Ingersoll Electronics, has compiled its own Top Twenty of best-selling cartridges on the UK market. Backgammon, Superman and Video Chess, which have only been available for three months, seem to be catching up quickly. Ray Brent, Ingersoll's director and general manager, claims that since the company gained the franchise about a year ago, Atari has become a "techno-cult" in the UK.

cessing from a mainframe on to a remote standalone system.

The tapes are compatible with a wide variety of existing computer systems. Typical price of a system comprising 64K-bytes of RAM, a 10-megabyte hard disc drive, two double-sided floppy disc drives, the magnetic tape drive and printer and VDU peripherals is about £14,000.

Macroprinters Microprices

Looking for dot-matrix printers costing a lot less than you budgeted for? Stop looking.

These three from Anadex not only offer lower initial cost, but also provide substantial savings on servicing.

For around £500, the Anadex DP-8000 provides 80-column printing at 112 characters per second, 84 lines per minute; switch-selectable baud rates from 110 to 9,600; 100M character head life; three standard interfaces (RS-232C, current loop and parallel bit); vertical tab, form feed, skip-over perforation controls; adjustable sprockets for any paper size; self-check diagnostic test facility; 1K character buffer standard with 3K option.

For a little more, the Anadex DP-8000AP Apple-compatible version provides the

required 96-column printing at 134 characters per second, plus all the features of the DP-8000 described above.

At less than £900, the new Anadex DP-9500 offers up to 220 character line width, with maximum printing speeds of 200 cps or 200 lpm; 150M standard or 650M optional character head life; 11x9 dot matrix capability; 'look ahead' bi-directional printing; 500 character buffer with 2.5K option, full graphics potential; communications control capability vertical and horizontal tabs.

You won't find a better bargain.

Details from Anadex Limited, Dorn House, Guildford Road, West End, Woking, Surrey. Telephone: (041 6) 6343. Telex: 858762 Anadex G.

APL training...

Book your ticket now.

If you need training which is relevant, practical and important, Datasolve's courses will take you where you want to go. We'll give you the benefit of years of experience and knowhow. Our instructors aren't just good teachers, they've done the job themselves. And there are plenty of satisfied customers who've travelled with us.

From beginner to fully-fledged professional we've structured our courses to give you the career progression you need. You'll get plenty of personal attention — classes are small — and so progress is fast.

Datasolve's APL courses are suitable for all implementations of APL. To book, or obtain more details either phone Mike Gough on 01-828 8104 or complete and return the coupon. We'll make sure you're on the right track.

BOC Datasolve

BOC Datasolve Education, 9 Rochester Row, London SW1 1LA.

Let our training take the strain.

Appointments THE NEWSPAPER COMPUTER PEOPLE RELY ON Appointments

LIFE IS WHAT YOU MAKE IT

(with a little help from your job)

Your job affects your whole life - not just the hours between 9 a.m. and 5 p.m. on weekdays. Your job affects where you live (or how long you spend commuting). It affects your relationship with your family (can you really put your hand on your heart and say that you've never taken it out on your ever-loving after a 'hard day at the office?'). And, of course, the money you earn dictates what you can or cannot afford to do with your own time.

Our client, a leader in the field of software development, is involved in a far-reaching project which, when complete, will affect the majority of the Western world.

With spacious premises in the Home Counties, the company is conveniently sited for rail and road links to most parts of the country. The rural setting takes the tension out of going to work and the facilities offered could even make it difficult to tear yourself away at the end of the day!

if you have a scientific/engineering background and experience in one of the following, we would like to hear from you:

Real-time software design
High-level languages (Algol, Coral, Fortran)
Systems engineering
Switching Systems

You'll be well paid - salaries are in the range £6,000-£10,000, depending on experience - and enjoy a comprehensive range of fringe benefits, including full relocation. There is a policy of continuous training and career prospects are first class.

Ring Jack Cowdy, Director, on 01-603 7335, quoting ref. RJ/1168.

TECHNICAL CONSULTANCY

£7,000 to £11,000 neg

Simulation Modelling Systems Design

We are offering an opportunity to join one of the leading systems consultancies. These situations are open to candidates who are qualified to degree level. They should have a proven technical record over at least the last two years together with the ability to communicate and utilise technical and supervisory skills to above average standards.

The positions available with our client will include work in some of the following and candidates should have experience in more than one of these areas:

- ★ Process Control Systems
- ★ Defence Systems (Military, Aerospace and Naval)
- ★ L.P. and other O.R. Techniques
- ★ Simulation ★ Systems Design and Assessment

Your career and expertise will benefit greatly by the company's plans to expand into new business areas. It is important that you are ambitious and prepared to train in new techniques while passing your own knowledge on to your colleagues. Salaries are negotiable and you are expected to prove your worth over the initial period with the organisation to take advantage of the six-monthly merit-based review system.

Contact Jack Cowdy, Director, on 01-603 7335.

SYSTEMS PROGRAMMERS

£9,000 neg.

plus subsidised mortgage, low-interest personal loans, profit-sharing, free lunches, free BUPA, non-contributory pension, over 4 weeks' holiday.

London-based with European travel
Milan Brussels Frankfurt Paris Zurich

Systems Programmers, who will be based in London, are required to join the Technical Development group responsible for software development and implementation for this international organisation's European computer installations. This will involve liaising with internal and external management and investigating, developing and implementing software for the powerful minicomputer configurations at each site.

There will be an element of European travel, probably around 15% of the time, and candidates must be prepared to travel for periods between one day and one week, sometimes at short notice.

The team is currently investigating new systems, which is a particularly interesting aspect of the responsibilities, providing team members with valuable insight into the company's future development. Candidates must have a sound knowledge of operating systems and should currently earn between £5,000 and £8,000 p.a. The company offers an excellent salary with fringe benefits that can theoretically add over £2,000 to the basic salary.

Contact Jack Cowdy, Director, on 01-603 7335.

Senior Systems Analyst

Springfields Works, near Preston

Springfields Works is BNFL's Uranium Fuel Centre situated in the Fylde area of Lancashire, between Preston and Blackpool. It produces the uranium fuel and intermediate uranium products for Britain's nuclear power stations and for overseas utilities.

An experienced Systems Analyst is required to take charge of the systems and programming functions of our Computer Section. We operate an ICL 2904 with on-line 7602's, linked to a central ICL 2880. Other mini-computer and micro-processor installations are planned for the immediate future. There are also current developments in the use of on-line systems and investigation of data base applications. The successful candidate will be responsible for the design, programming and implementation of a variety of computer systems and will be required to establish and maintain programming, documentation, testing and user training standards.

Applicants, male or female, should have a relevant honours degree and/or be members of an appropriate professional institution. However candidates who lack such qualifications may be considered if they have training and experience which is acceptable being of equal value.

Applicants must have completed successfully at least one major project involving on-line and/or data base techniques.

A knowledge of programming, preferably in COBOL, RPG2 or FORTRAN is essential. Familiarity with ICL 2900's would be an advantage and the successful candidate must be able to liaise effectively with management at all levels.

Starting salary will be assessed within the range £7845 to £9050 per annum.

In addition, successful candidates will be eligible to participate in the Company's self-financing productivity scheme.

We offer an excellent contributory superannuation scheme and good holidays. Company housing and generous assistance with relocation costs will be available to eligible recruits.

Send post card for application form (NO STAMP REQUIRED) to Assistant Staff Recruitment Officer, BNFL (FREEPOST), Springfields Works, Salwick, near Preston, PR4 0XP, or telephone Preston 728262, Extension 8131.

The closing date for receipt of completed application forms is 30th April, 1980.

First-class DP management: the language of our success

c. £10,000

Manchester area

As one of the country's leading software houses, the Professional Services Division of Data Logic provides a comprehensive systems and software consultancy service and has an enviable reputation for professional expertise. With some 300 highly-skilled staff, it has succeeded in gaining business from companies in every major sector. The strength of Data Logic's specialist management now needs to be increased still even further to handle an increasing flow of equally impressive projects.

PROJECT MANAGERS: heading up project teams, mainly on customer sites, will require sound technical and business skills to assess project potential, along with broad management ability. Around 10 years' experience in the computer industry - part of which should have been at a management level - must include some systems analysis/design exposure.

BUSINESS ANALYSTS: responsible for assessing customer needs before, during and after any systems installation. Candidates will need an O&M, business analysis or consultancy background, together with broad organisational experience in areas that have significant interface with computers. The overriding requirement is for someone with proven ability to produce results through the effective implementation of business plans.

TECHNICAL ANALYST: candidates should be software technicians with a sound knowledge of systems programming: broad experience including Data General, DEC and Hewlett-Packard, should preferably include database techniques.

Backed by Raytheon, one of the world's biggest electronics and software groups, Data Logic can offer excellent career prospects both within the Professional Services Division or in other parts of the company. Located in Manchester, you will enjoy an excellent remuneration package including profit sharing and generous assistance with relocation expenses where appropriate. In addition, a company car and BUPA could be provided, depending on experience. Please telephone (reverse charges) or write to: Barbara Hawkins, Data Logic Ltd., Westway House, 320 Ruislip Road East, Greenford, Middx. Tel: 01-578 9111.

PROGRAMMER/ ANALYST

circa £8,500 - Andover (Hants)

Are you ready to make your mark?

Our client is an expanding international company in the marketing and distribution fields and will soon be establishing a new Data Processing Department in Andover (Hants) based on an IBM System 34 with standard applications software.

This expansion affords an excellent career opportunity for a programmer/analyst, with small to medium-sized computer department experience, who is ready to take on full responsibility for initiating, developing and implementing new systems to meet the company's data processing requirements. You must have at least 1-2 years' experience of programming using RPG and have a total of 4-5 years in systems design and development. You should also be familiar with mini-computer software and applications.

In addition to an attractive salary, an excellent benefits package will be offered. Relocation expenses will be paid in appropriate cases.

For more information, ring Roger Kliney in the strictest confidence today on 01-388 8441, or write to him with full career details, quoting ref: CW11 to: Nationwide Advertising Service Limited, Clifton House, Euston Road, London NW1 2RA

University of Bristol Head of Micro-Processor Support

The University wishes to establish a Micro-processor Support Service within the Computer Centre to encourage and support the use of micro-processors within University Departments. It is seeking an

Experienced Electronics Engineer

to lead this new development in the computing service. The person appointed will be responsible for providing a consultancy service to user departments, the provision of courses on the principles and practical applications of micro-electronics and for ensuring that adequate programming, testing and diagnostic facilities are available to support those micro-processor systems in general use within the University.

Applicants should hold a degree in engineering, electronics or an equivalent qualification and preferably have some experience in the design and implementation of micro-processor systems. Some knowledge and experience of software systems and data communications techniques is also highly desirable.

The salary for the appointment will be on the scale Grade 1A: £5,052-£8,769 p.a. or Grade 11: £5,427-£10,484 p.a. (depending on qualifications and experience). Further particulars may be obtained from the Registrar and Secretary, University of Bristol, Senate House, Bristol BS8 1TH, to whom applications should be sent by 9th May, 1980 (please quote reference EB).

Islington Finance

TRAINEE / OPERATOR / SENIOR OPERATOR

(£3,813-£8,259 inc. plus 12½% two shift allowance - comparability award pending)

Required for 2.75 MB ICL 2980 running under VME/B and GEORGE 3. Experienced operators should have a minimum of 1 year's experience. Trainees should have relevant academic qualifications.

Contact Chris Carter on 01-226 1234 Ext. 216 or 218 for further details or write to Director of Finance, Town Hall, Upper Street, London N1 2UD quoting reference F200. Closing date 1st May, 1980.

OUR OFFICES ARE OPEN TO ALL RACES AND BOTH SEXES

Software opportunities in Holland

in computer controlled telecommunications systems.

Increasing world sales of our public telephone switching systems (for instance a recent large order from Saudi Arabia) confirm Philips' position as one of the world leaders in this field. This, plus enhancements and additions to the range of switching systems, has created vacancies within the international development team working on these systems.

The development effort extends into the field of space and time division switching systems for local and trunk application and maintenance and network management centres. The work will include real time telephony applications, basic operating systems, general support and project generation areas.

That is why we are now looking for a number of

systems designers and systems programmers

To join our headquarters organization in Hilversum, Holland. Systems Designers should have at least 2-3 years experience in real time or control systems software design. Systems Programmers should have at least 2 years assembler language experience or experience in the high-level scientific programmer languages.

Attractive first class salaries will be offered.

In addition fringe benefits include:
— subsidized housing in an attractive area in Holland ('the garden of Amsterdam')
— profit sharing
— full relocation expenses
— settling in allowance
— contribution towards medical insurance costs.

The working language is English. Both permanent and temporary (3-4 years) opportunities are available.

Interested? Do not hesitate to ring or write in full detail to Mr. Harry Constantine in our U.K. laboratory on Melmesbury 2861, ext. 266. Full address: Pye-T.M.C. Ltd., Ekco Works, Swindon Road, Malmesbury Wiltshire SN169NA for further information or write to: Philips' Telecommunications Industrie B.V., personnel department, attn. Mr. Ben van Dijk, p.o. box 32, 1200 JD Hilversum, The Netherlands.

Telecommunications

PHILIPS

Systems Programmers

with or without DEC experience

The Scientific Division of ISA-UK provides a specialised service to the scientific and engineering community as well as a general time-sharing service for companies within the Philips U.K. Group. We have vacancies for systems programmers for our DEC 2060 installation.

● We will pay up to £9,000 p.a. for systems programmers with experience of DEC 10 or 20 equipment. You will be part of a small team, chiefly engaged in developing both major and minor enhancements and facilities in the software area to meet our users' requirements. As well as evolving management on new hardware and software installations, you will carry out the usual implementing, testing and maintaining of manufacturers' software releases.

● a £8,500 p.a. + training! We are looking for someone with a scientific background and an interest

in telecommunications with a knowledge of at least one high-level scientific language like Fortran. Although you should have experience of an assembler and time-sharing, you probably won't have had experience of large DEC machines, but we are willing to train the right person, so that you can become part of the Philips' team which keeps it years ahead.

As well as good working conditions in Croydon - and we will help you with relocation expenses - we offer 5 weeks holiday, pension scheme, sports and social club and subsidised staff shop with all the range of Philips' products.

Want to learn more? Ring Mike Endicott today for an application form and further information on 01-886 7766 or write to Val Apple, Divisional Personnel Officer, Philips (SA-UK), City House, 420/430 London Rd., Croydon CR9 3QT.

PHILIPS

Computer Services Sales

London

Sussex

Manchester

c. £15,000 + Car + BUPA

Unilever Computer Services employs some 700 data processing professionals, and is one of the top three computer services companies in the United Kingdom. It has affiliations with a similar major U.S. company, and as part of the Unilever Group it enjoys the financial backing of an organisation which has an annual turnover of around £10,000,000,000.

Unique within the industry U.C.S.L. provides computer services based on a total range of capabilities; main-frame processing, R.J.E., time-sharing, on-site minis, network facilities and applications software development. Integrating and developing these services is one of the largest and most professional customer services groups existing in Europe.

Since 1975 U.C.S.L. has enjoyed a fivefold growth. To maintain this performance the company is now seeking to employ additional experienced computer industry sales professionals. These individuals must have the ability to develop existing accounts and

the energy and talent to generate and negotiate new business contracts at the highest level.

Successful applicants will have a thorough knowledge of computing facilities and an understanding of their application to a wide range of business requirements. They will be capable of working with and motivating high calibre technical support personnel.

The remuneration package offered is second to none with a high base salary, a generous commission scheme geared to realistic quota levels, free BUPA membership and a company car.

This is a real opportunity to join a company whose plans for success in the 1980s are based on a unique mixture of financial security, technological innovation and the continued adherence to a proven, successful business philosophy. For full information telephone Kevin McCourt or write with brief details quoting reference 3102. All applications will be acknowledged and treated in the strictest confidence.

NORTH WEST

**MERSEYSIDE
COMPUTER SELECTION** c £10,000 + Benefits
A major Office wishes to appoint a specialist at a senior level. The position will entail high calibre design, development and implementation of hardware, software and systems. The candidate will have a minimum of 12 months' experience in a similar position. The role will entail a high level of responsibility and will involve a significant contribution to the success of the company.

**LAKE DISTRICT
CHIEF PROGRAMMER** c £7,000
This fast moving company is seeking a programmer with a sound applications background, together with a proven ability to develop and support systems on IBM and micro hardware. The position will entail staff supervision and user support.

**NORTH CHESHIRE
SENIOR ANALYST** c £7,500
Our client is seeking an Analyst with over 2 years' general commercial experience in a programming background in COBOL. The job will entail considerable user contact, design and experience in this area is sought.

**LIVERPOOL
SYSTEMS PERFORMANCE** c £10,000 + Bonus
A major organisation is seeking a professional person to undertake a systems performance role. Experience of developing real-time systems on mainframes with preferably monitoring/ simulation/tuning skills. This is a senior position with considerable scope and responsibility.

**MERSEYSIDE
SENIOR ANALYSTS** to £8,500 + Bonus
Our client is involved in large scale systems development utilising both main and micro hardware together with sophisticated on-line data base software. They require a senior analyst with at least 2 years' significant analysis experience.

**MANCHESTER
SYSTEMS ANALYSTS** c £6,500
Large IBM user seeks a number of young analysts who have over 12 months' systems experience together with a programming background. Systems under development are both advanced and technically challenging.

**MANCHESTER
SYSTEMS CONSULTANT** c £6,000 + Bonus
Our client wishes to appoint a consultant who will undertake user and sales support. You should combine at least 12 months' COBOL together with some analysis experience, and be an outgoing personality.

**MANCHESTER
SYSTEMS ANALYST** to £7,500
This manufacturing company requires an Analyst with a wide background of manufacturing systems including production control applications, ICL 1800 experience is desirable.

**NORTH CHESHIRE
SENIOR ANALYSTS** to £7,500
This organisation urgently requires professional staff with over 2 years' commercial experience. A knowledge of large BURROUGHS hardware and DMSII design is a distinct advantage.

**PRESTON
SYSTEMS ANALYST** to £7,000
Our client is seeking an Analyst with around 2 years' general commercial experience. Developments are heavily biased towards on-line databases on IBM hardware and knowledge in these areas is sought.

Phone STEVE SYKES on 0524 444185 (daytime) or 0524 682417 (evening and weekends) or write to him at the address below.

**ROCHDALE
ANALYST/PROGRAMMER** to £8,500 + Benefits
A hardware manufacturer requires two analysts/programmers with sound commercial experience to undertake support roles. Excellent negotiable salary package.

**SOUTH MANCHESTER
PROGRAMMER** c £5,500
A programmer with around 18 months' COBOL experience on systems of an engineering/manufacturing nature will find excellent prospects with our client. Any hardware background considered.

**SOUTH MANCHESTER
SENIOR ANALYST/PROGRAMMERS** to £8,000
Our client, a leading systems consultancy offers a top notch salary and involvement on large scale projects to analysts/programmers with in-depth IBM COBOL experience. CICS and/or OL/1 very favourable.

**NORTH MANCHESTER
SENIOR PROGRAMMER** c £7,000
A manufacturing company will shortly be updating to IBM 4341 and require a senior programmer with around 3 years' commercial COBOL and some CICS.

**LIVERPOOL
SYSTEMS ANALYSTS** c £7,000
This major company is looking for analysts with around 3 years' IBM experience. The ideal applicants will have a minimum of 1 year's programming in COBOL, PL/I or ASSEMBLER. Online and Database a distinct advantage.

Phone GORDON FORBES on 0524 106321 444185 (daytime) or on 0524 479172 (evening and weekends) or write to him at the address below.

**MANCHESTER
SYSTEMS PROGRAMMER** to £7,000
A UNIVAC installation requires a systems programmer having a background of at least 3 years' ASSEMBLER experience. Long term prospects in a modern and expanding environment.

**MANCHESTER
PROGRAMMER** c £5,500
Our client utilises the latest HONEYWELL hardware, and require a programmer of around 2 years' COBOL experience to assist in large scale on-line developments. Any mainframe background considered provided applications experience is of a general commercial nature.

**MANCHESTER
SENIOR PROGRAMMER** c £5,500 + Big Benefits
A major hardware manufacturer wishes to appoint a senior programmer, having a minimum one year's ASSEMBLER on any hardware. Financial applications experience beneficial but not essential.

**MERSEYSIDE
PROGRAMMER/ANALYST** to £6,000
A lively systems house requires a programmer with around 18 months' COBOL in a commercial environment plus a good educational background to initially undertake a programming role, but to also receive analysis training.

**LIVERPOOL
PROGRAMMER/ANALYST** to £6,000
A world renowned manufacturing company has a requirement for a programmer with around 2 years' ICL COBOL, to assume an analyst/programmer position. Relevant analysis training given to a good commercial programmer.

Office 1170

Analyst/ Programmers for Inspec

c £7,500

INSpec is developing a new system to maintain its lead in the production of bibliographic databases, text handling, computer composition and typesetting.

The system is based on a POP 11/70 under RSX 11M with on-line data entry and amendment of bibliographic data on VT100 or extended character set Logic terminals, with proof-printing on a Varolect electrostatic plotter printer. The on-line system will act as the front end to the existing 2966 under DME due to be upgraded in 1981.

There are vacancies for programmer/analysts with design and programming experience in ICL/IBM assembler and high-level languages keen to apply their skills to the problems of developing the new on-line system and communications between the existing machines and future replacement. Experience of ICL or POP 11 equipment and of text handling of bibliographic systems is an advantage but not essential.

These posts are open to male and female applicants who will work in pleasant offices at Hitchin in rural Hertfordshire. Competitive salaries, with twice-yearly increases are offered together with job security and satisfaction in a friendly, professional atmosphere. Benefits include a 35-hour week on flextime, 20 days' annual leave, attractive pension and life assurance schemes, subsidised meals, lunch vouchers, a sports and social club and assistance with relocation.

INSpec is a department of the Institution of Electrical Engineers and has been operating its computer-based abstracts database system for over eleven years.

CVs or requests for an application form should be addressed to

Simulator Engineer and Technician

Two challenging roles for
down to earth professionals

Simulator training is the most economical and effective means of putting pilots through their paces. Such are the demands of flying today that Britannia Airways' 6-axis Boeing 737 flight simulator, fitted with a computer generated image, is in constant use around the clock.

We're an airline that's going up in the world. We're growing in almost every aspect of our business and the simulator section now includes a 737 cockpit procedure trainer that will exploit the value of the flight simulator even more.

We now require two experienced professionals with a down to earth approach to their work to join a small informal team at our main base at Luton.

Simulator Engineer c. £7,500 + shift premium.

Our need is for a proven electronic/computer engineer preferably with experience of one of the following functions: programming, hydraulics, or aircraft systems.

Electronic Technician c. £5,500 + shift premium.

You could be from almost any area of electronics, but an ONC would be an advantage together with a knowledge of digital electronics, PCB assemblies etc.

In addition to attractive salaries we offer all the benefits normally associated with a successful airline.

Please send full details of your background and experience to Personnel Controller, Britannia Airways, Luton Airport, Luton LU2 9ND. Telephone: Luton (0582) 424155

Airways**

WILTSHIRE COUNTY COUNCIL

ASSISTANT COUNTY TREASURER (COMPUTER SERVICES)

SALARY: £12,921 x £297 (3)-£13,812

The County Council operates an IBM 3031 (jointly owned with Thameston Borough Council) with many terminals. The computer carries out a wide range of applications for various departments of the County Council and for a number of other authorities including the Area Health Authority. More than half the applications currently processed are non-financial and there are plans to extend the services provided.

The successful applicant will be directly responsible to the County Treasurer for the management of the Computer Division (ISO staff) and the co-ordination of all the Council's computer services.

Assistance towards removal and relocation expenses in approved cases.

Further details may be obtained from the County Treasurer, County Hall, Trowbridge, Wilt. BA12 8JJ. Telephone Trowbridge 3841 Ext. 2608 (Mrs. Thorn), to whom applications, with full details of age, education, qualifications and experience, together with the names of two referees (one of which must be the current employer), should be returned by the 31st May, 1980. (196)

2neg. PROGRAMMER - Middx. Programmer with experience of COBOL or PLAN to join staff team within large organisation. ICL hardware.

To 2SK SYSTEMS ANALYST - S. London. Required to develop accounting systems. You will need 3+ years experience, to include design and implementation of at least one commercial system.

28.5K PROJECT LEADER - London. Good programming and analysis ability with several years experience on Honeywell, IBM or ICL hardware in a commercial environment.

to DM 65,000 p.a.

We are an established systems house specialising in the real time application of mini computers to process control, communications and terminal based systems. Our German operation has built up an excellent reputation for high quality work which has led to an increasing demand for its services.

As such we are looking for analyst/programmers to join our permanent staff for work on a variety of interesting and demanding projects.

The computers we are working on include DEC Honeywell Ferranti Data General TI AEG Siemens Motorola Intel

Among the many benefits you will have working for an English company in Germany are:

- Profit sharing
- Travel allowance or company car
- Attractive holiday arrangements
- Free language tuition
- Removal and settling in allowance

You will also enjoy a choice of good living accommodation with minimal commuting, and the advantage of excellent connections to the rest of Europe for travel and recreation purposes.

Additionally, we have vacancies in our London and Manchester offices.

Please apply to:

Ray Steadman, DAI GmbH, Harzburger Str. 41, 4078 Neuhaus, (n. Frankfurt), Tel: 06102-38386.

Ms. Kristin Jew, DAI Ltd., Alpha House, 24 Warwick Street, London W1R 5RB, Tel: 01-734 5486 ext. 31.

Patricia Hewitt, DAI Ltd., Alpha House, 24 Warwick Street, Wythenshawe, Manchester M22 5RG, Tel: 061-436 3122.

DAI

Systems & Programming Manager

Middlesex to £11,000

A major company in the fast moving consumer industry has recently replaced its existing computer facility with Honeywell's latest machine.

A Manager is now required to transfer programmes to the new system and develop fresh applications.

This is an outstanding opportunity for candidates, with a sound background in systems and programming, to work in a progressive and expanding company using the latest technology.

Prospects of promotion are excellent together with a number of benefits one would associate with a company of this standing.

Candidates, male or female, please write or telephone D. D. Linstead.

G-B Management Services

Management Consultants
170 Piccadilly, London W1V 9DD 01-499 5308

Athens - Greece Analyst-Programmer Greek National

We are a major Greek general contracting company, operating both in Greece and abroad. Our EOP Dept. is located in Athens and is equipped with an on-line computer system based on a General Automation 16-480 mini computer. Up to now we have been involved with the development of on-line commercial type applications, but we have already started implementing a small DBMS of our own design. We are looking for a Greek national analyst-programmer willing to return to Greece. He should preferably have Cobol background and some experience on mini-based on-line commercial applications. Some systems management experience and/or OSMS knowledge would be advantageous. Nevertheless, Computer Science graduates without relevant experience will also be considered. Salary is negotiable according to qualifications and experience, but within the Greek standards.

Please write stating full details of academic and commercial experience to:
Mr. Nicolas Dimitriadis
c/o BICAT CORPORATION
P.O. Box 22 Kifissia, Athens, Greece
Telephone: 0030/1/682 6700

COMPUTER PERSONNEL RECRUITMENT MANAGER

Central London

We require a senior executive to develop a new recruitment company involving all categories of technical personnel for the supplier sector of the computer industry. This is an excellent opportunity for a creative and experienced recruitment consultant to utilise his or her ideas and initiative within a well established organisation whilst enjoying considerable scope for personal advancement, possibly to director level. Candidates will have at least 3 years experience of recruiting computer personnel, preferably in a management role within a well established recruitment agency. There is considerable potential for high earnings via an income package which will be commensurate with the experience and achievements of the selected applicant. We also have an exceptional job opportunity for a

Sales Recruitment Manager

Applicants must be completely fluent in all aspects of computer sales or have direct experience of sales recruitment at a senior level. There is considerable scope for personal advancement, possibly to director level. Please supply complete curriculum details to Alan Williams quoting reference SMR 014.

OPS. MANAGER

to £10,000
WEST MIDDX. / SURREY

Our client is a multi-national engineering conglomerate and a leader in its particular specialist field. In the U.K. they operate a medium sized mainframe utilising database and on-line techniques and are currently in the process of moving the hardware to a prestigious new site.

A requirement has arisen for a mature and resourceful specialist to head up this Computer Operations Section. This is a career opening and will probably prove attractive to a Chief Operator in a large installation or an Operations Manager in a small D.P. Unit.

The position offers an excellent basic salary and there are other attractive benefits. In appropriate cases relocation expenses of up to 30% of starting salary will be paid, plus generous subsistence allowances. The essential requirements for the post are:

- Sound operations experience on any mainframe
- Proven management ability
- A strong regard for standards and disciplines and the confidence to enforce them.

If you feel you measure up to this key job contact JACK COLLINGS at his office from 9 a.m. - 5 p.m. on 0273 833848. Alternatively simply send in your career resume and we will get back to you.

SENIOR PROGRAMMERS HIGH WYCOMBE

£9,000

- PLUS: CAR
PLUS: Regular Salary Reviews
PLUS: Non-Contributory Pension Scheme
PLUS: Removal Package

Our Client, a member of a group of companies with a turnover in excess of £500 millions, is seeking SENIOR PROGRAMMERS to undertake DEVELOPMENT WORK. The hardware is UNIVAC 90/30 offering REAL TIME, ON-LINE facilities through a network of SIXTY VDU'S in SEVENTEEN LOCATIONS.

Applications will be considered from candidates with any mainframe background but ideally this should be Univac, Cobol and Assembler. About 3 years proven experience is required, together with evidence of dedication and commitment.

The Programming team traditionally has been a compact unit which is now being expanded to meet further growth. The development of individuals within the department is encouraged by their involvement in all aspects of the system.
